Assignment 1 – What You Are Building

Format
Individual

Weight
20%

Launch
Week #3

Presentation
7 min

System + Task

nopCommerce

github.com/nopSolutions/nopCommerce

Real ASP.NET Core e-commerce platform with real checkout flows.

Your task: add OpenTelemetry observability to support a meaningful flow.

Why This Is Architecture

This is not just instrumentation setup.

- Decide what to instrument
- Decide what to redact or mask
- Justify those decisions as architectural tradeoffs

PII appears across browsing, cart, checkout, and payment flows.

Deliverable: observability with a documented privacy strategy.

Assignment 1 – Logistics and What to Prepare

Logistics

Full brief: Assignment document

Presentations: 24th and 25th March

Presentation time: 7 minutes

Questions: ask now if anything in the brief is ambiguous

What You Must Be Ready to Explain

- Which spans you created and which attributes you included
- Which PII-adjacent fields you excluded or masked
- Where redaction/masking happens (SDK, collector, storage, etc.)
- Why these choices are architectural decisions, not just implementation details

SHOW

One meaningful flow

FOCUS

Reasoning + tradeoffs

AVOID

Long setup walkthroughs

Presentation – 7 minutes (make them count)

What to show

- **Architecture reasoning:** what you instrumented, what you masked, and why
- **Short demo** of one meaningful flow with telemetry visible
- **Privacy strategy:** where you redact/mask and why that layer was chosen
- **Tradeoffs:** what you did not instrument (and why)

What makes a strong 7-minute presentation

- Lead with the problem and your design choices
- Show evidence, not just screenshots (telemetry + system behaviour)
- Be explicit about privacy tradeoffs and rejected alternatives
- Keep the demo focused: one flow, one insight, one takeaway
- Do not spend time on repo/commit walkthroughs (those will be reviewed later)

Evaluation Update

FINAL EXAM
