Architecture

Metrics Implemented

- **orders.placed**: counter that tracks the total volume of successful and failed orders
- **checkout.duration**: measures the latency of the entire **PlaceOrderAsync** operation
- **inventory.update.duration**: tracks the performance of database inventory adjustments
- **payment.provider.duration**: measures the latency introduced specifically by the process payment operation

Privacy Strategy

- Included only non-PII business information, like Customer IDs, Payment Methods and Total Order Amount
- Explicitly excluded personal data like emails, billing addresses and credit card information
- Also redacted possible personal data that could appear in auto generated SQL traces
- Used a PII Sanitization Processor at the SDK level, before traces reached the OTLP exporter, meaning that no sensitive data left the application

Dashboard

Distributed Traces

Add Product to Cart Traces

Trace ID	Trace name	Start time	Duration
